# Positioning the Container

Ensure that the front of the container is in a higher position compared to the back/door side, so that it will have the necessary slope to facilitate the discharge. Interval of **15cm** is sufficient.

EFFICIENT  
SMART  
SAFE

# l Coupling

Our standard valve is 3" male camlock.

You will need to have a **3" female cam-lock** coupling. (DIN EN 14 420-7)

Upon request 2" reductor is available.

# Coupling

1. Remove the dust cap.
2. Couple the hose.
3. Compress the latch.
4. Rotate the arm.
5. Unroll the bonnet.

**EFFICIENT  
SMART  
SAFE**

# Discharging

- Start discharging the E-Flex.
- Do not suspend the hose.
- Use a pump to decant the flexitank.

**EFFICIENT  
SMART  
SAFE**

# Flexitank Lashing Straps

When the discharging is completed, untie/cut the lashing straps (shown with red arrows) fixed to the container lashing rings.

AC42 / AV42 / EA42

A003/A0L3/A0P3/AVP3

EA41 / EC41

**EFFICIENT  
SMART  
SAFE**

# Discharging

After pumping all the product out, pull both sides of the E-Flex to the center.

# Discharging

Roll-up the E-flex starting from the front/nose side of the container, pushing the liquid towards the valve.

**EFFICIENT  
SMART  
SAFE**

# Discharging

The E-Flex should be empty and ready for recycling at this point.

**EFFICIENT  
SMART  
SAFE**
